### The Worlds of the Squatsretch System

**Que'ldro'ss** is the name of a giant spiral galaxy. On the outer limbs of one of its great arms lies the Squatsretch star system.

The planets' orbits are all affected by the eccentric, sometimes elliptical orbits of the three stars, and also their planetary neighbours.

The triple star Squatsretch system consists of the following three suns and their accompanying planets...

**Que'Il** is the smallest of the three suns and is a white dwarf. It has three planets that orbit around it - two in a clockwise rotation with the third in a tight elliptical orbit from right to left and at a 35° angle to the star's north facing pole.

**C'hlorinth** is a small, grey pseudo-planet.

**F'ornithyll** is yellow-and-red Gaeyrth-sized planet.

**Th'Ornitnoww** is the largest of this star's rock-based planets.

two suns and accompanying planets revolve.

It also has its own three large gas giants and seven smaller planets revolving around it.

**O'ryioth** is a huge orange hyper-giant, and the largest and most violently storm-active of Squatsretch's gaseous planets

**Ruulle** is a yellow gas giant with green and white storm clouds

**Myr'nriol** is a blue gas giant and the smallest of the three

The rest of the planetary system consists of rock-based worlds...

**Y'Cthinia** is a blue-hued planet

**Xo'Tolos** is a pale-blue planet

**Jac'Obirol** is a green-and-blue world almost as large as Cydnamoria

**W'wrell** is a small grey planet

**Cydnamoria** is the largest of the rocky planets and has a warm orange hue

**Vithanius** is a green-hued planet

**G'Anyreanos** is a violent black and red planet full of volcanic activity

[widgetkit id=8]

**Exxotryll** is the middle-sized of the three suns and it is a yellow sun that is slightly larger than our own Sol. Its ten planets mainly rotate around it in a counter-clockwise retrograde orientation.

**Aeryiell** is the smallest of the innermost planets. Uninhabited due to its close proximity to the largest of the three suns, this little pink-hued planet is practically hidden by its huge parent star

**Uraddor** is a larger planet than Aeryiell, and is only slightly smaller than Gaeyrth. Its blue hue sets it apart from its sister planets

**Gaeyrth** is the third innermost planet within the Squatsretch system. It is a small unassuming world, innocuous but for one wonderful fact - that it harbours life. It is home to a myriad of different races and creatures. The adventures we follow take place, for the most part, on this world

**Ylliaad** is a giant green gas giant

**Aeynied** is a purple gas giant

**Prot'orius** is a star-like pseudo-planet, whose yellow hue and back spots are caused by atmospheric disturbances

**Randyll** is another habitable planet like Gaeyrth

**Bry'llonn** is a red-hued rock-based barren planet

**Kryxx'II** is a blue-green planet – pretty inhospitable with a methane rich atmosphere.

**N'roll** is a small, moon-like rocky planet
